Leadership in Energy and Environmental Design

LEED is the green building rating system designed by U.S. Green Building Council. It is the world’s foremost environmental standard for clean, energy efficient building design.

Farmingdale State College
State University of New York

LEED Green Associate

Our LEED course is six 4-hour sessions.

In Level 1, Green Associate, you will learn about U.S. Green Building Council’s core principles and procedures and gain the knowledge to take a 3rd party test to receive the coveted Green Associate credential.

The last two sessions, Level 2, LEED AP, provide a deeper understanding of LEED principles in preparation for the LEED AP test. There are only 130,000 LEED Accredited Professionals in the world…!

Who should take LEED?
Architects and engineers are often required to take LEED, but LEED affects everyone. More towns than ever before require new construction to be green. Lawyers, property managers, suppliers, brokers, bankers, decorators, supers, maintenance crews, insurance professionals, and others involved in real estate need to be familiar with changes in best practices of energy conservation. Your green credentials will get employers’ attention.

LEED grows green for you!

Green Principles and Practices

“Our is green?” Everywhere we turn these days, we are bombarded with messages about “going green.” But what does going green really mean? What are green practices and how can they be implemented? This comprehensive course, taught by one of the nation’s leading environmental experts, demystifies the subject. In this course, you will learn about the basic concepts and practical implementations. You will discover simple ways to go green, as well as be introduced to the technology like fuel cells and cogeneration. You will learn about the multitude of financial incentive programs available for going green, and how to apply them. The U.S. Council of Economic Advisers stated, “Green jobs pay 10-20% more than other jobs.”
