PSY 441 Human Factors Psychology Internship/Senior Project II This second Internship/Senior Project course will provide seniors in the Human Factors Concentration with the opportunity to apply human factors knowledge and methods in an actual work environment. A variety of options will be available for completion of this course: internship, research assistantship, or independent project. In an internship, the student will work in a local business, laboratory, or service organization. As a research assistant, the student will work with a faculty member as an assistant in their ongoing research of consulting. Alternatively, students may develop an independent project under the supervision of a faculty member. The selection of which option is best will be made by the student and his/her advisor based on which best meets the student's educational and career goals. Regardless of the option selected, each student will attend seminars and complete a research or design project. Prerequisite(s): PSY 440. Credits: 3 (1,0,2)
Human Factors Psychology/Internship/Sr. Project II

Course Description

PSY 441 is primarily a field work course although attendance is also required at weekly seminars. Students placed at internship locations will have a designated supervisor at the placement site who will communicate with the course professor regarding the student’s performance and progress. This course will provide seniors in the Human Factors Concentration with the opportunity to apply human factors knowledge and methods in an actual work environment. A variety of options will be available for completion of this course: internship, research assistantship, or independent project. In an internship, the student will work in a local business, laboratory, or service organization. As a research assistant, the student will work with a faculty member as an assistant in their ongoing research. Alternatively, students may develop an independent project of their own under the supervision of faculty member. The selection of which option is best will be made in by the student and his/her advisor based on which best meets the student's educational and career goals. Regardless of the option selected, each student will attend seminars and complete a research or design project.

Behavioral Objectives

1. The student will acquire an improved understanding of the current theories of human factors by applying them in a realistic research project or work setting.

2. The student will develop an in-depth understanding of a specific area of human factors psychology through application of knowledge to practical issues.

3. The student will develop an ability to work with others and to communicate relevant aspects of this work to supervisors and colleagues.

4. The student will learn how to document the results of research or other human factors related activity in a professional manner.

COURSE OUTLINE

Independent Project or Research Assistantship
Students electing to perform independent project will work with a faculty member to select a suitable human factors research or design topic. Once selected, the student will be responsible to develop a schedule with milestones that are appropriate to the research or design effort being undertaken. The schedule and milestones will be discussed with the faculty member and will form the basis of submitting materials for comment and grading. Some examples of milestones for research and design efforts are listed below.
**Internship**

Students electing to perform an internship will work with a faculty member to select a suitable position in a research or design oriented company or other approved internship site. Once selected the student will be responsible for developing a schedule with milestones that are appropriate to the internship. The schedule and milestones will be developed jointly with the faculty member and the internship supervisor. This schedule and milestone plan will form the basis of submitting materials for comment and grading. Some examples of milestones for research and design efforts are listed below.

**Sample Milestones for Research and Design Projects**

**Research Project**

- Topic selection and hypothesis formulation
- Research proposal - description of the proposed study methodology
- Pilot test results
- Completed statistical analysis
- Draft report for comment
- Final report

**Design Project**

- Topic selection and description of the expected product or final result
- Design plan (what human factors analyses will be conducted)
- Design process analysis results
- Concept design
- Design evaluation
- Final design documentation
