Farmingdale State College, Office of Institutional Research Results of the 2018 Faculty Survey of Student Engagement

Introduction

In the spring 2018 semester Farmingdale full-time faculty participated in the administration of the Faculty Survey of Student Engagement (FSSE). The survey, administered by the Indiana Center for Postsecondary Research, measures the extent to which faculty encourage students to engage in practices understood to be effectively linked with positive learning outcomes, personal development, student satisfaction, and graduation. It also collects information about how faculty members spend their time on professional activities. The FSSE explores student engagement from the faculty perspective and results can be used to identify areas of strength, as well as aspects that may warrant attention. When paired with results from NSSE (the National Survey of Student Engagement in which first-year and senior students are asked similar questions), the FSSE provides a picture of how faculty perceptions and expectations compare to students' experiences. NSSE was administered to students at Farmingdale in spring 2017.

Methodology

Of Farmingdale's 218 full-time faculty members, 139 participated in FSSE for a response rate of 64%. They were asked to respond to questions about student engagement based on a course section they taught during the academic year.

Key Findings

- There is a disconnect between the high importance that most faculty members place on internships, field experiences and culminating senior experiences and the overall level of student participation in them.
- In general, few faculty members believe that it is important for students to participate in study abroad before they graduate. Similarly, in NSSE, students reported low levels of participation study abroad.
- The majority of faculty members indicated that it is important to include diverse perspectives in their
 courses and most are providing at least some opportunities for their students to engage in discussions
 with diverse students. Similarly, students are reporting they often have had discussions with people
 from different backgrounds during the academic year. However, students reported lower levels of
 diverse perspectives in their coursework.
- The majority of faculty members judge students' relationships with faculty members to be positive, and students actually give their relationship with faculty higher ratings.
- Student/faculty interaction, including discussions about; career plans, course topics outside of class, and academic performance was reported to occur more frequently by faculty than students.
- Virtually all faculty members would like to see more emphasis on institutional support to help students succeed academically.

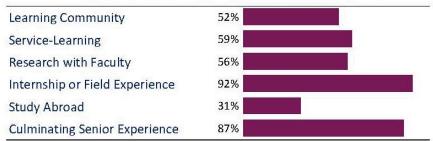

- On average, our faculty members spend 23 hours per week on teaching activities, and are spending
 more time on committee and administrative duties than they are on research, creative or scholarly
 activities.
- The majority of faculty members substantially encourage their students to reach out to other students for help in understanding course material or preparing for exams, yet students are not often collaborating with other students in such a way.
- Faculty and students were in agreement that coursework substantially emphasizes applying facts, theories or methods to practical problems, analyzing an idea in depth by examining its parts, evaluating a point of view or information source, and forming a new idea from various pieces of information.
- Almost all of our faculty members structure their courses at least quite a bit so that students learn critical and analytical thinking. Similarly, the learning outcome that most seniors stated their experience at Farmingdale contributed very much to is thinking critically and analytically.
- Students reported much higher levels of memorization than perceived by faculty.
- The learning strategies that faculty substantially encourage students to do, including reviewing notes after class, identifying key information from reading assignments, and summarizing what was learned in class, is often or very often followed by most students.
- Faculty members expect students to spend more time preparing for class than they actually are spending.
- Most faculty members indicated that they served as an academic advisor during the academic year.
 There is a disconnect between the high importance that advisors of upper division students place on discussions of career interests and post-graduation plans, help with academic difficulties, help with obtaining information on special opportunities and being informed about academic support options, and the extent to which senior students reported experiencing such support.
- Just over one-half of faculty members attended or presented at a professional conference focused on teaching during the academic year. The top three faculty responsibilities that faculty members stated it is important for their institution to assist them with are; creating a supportive environment, developing students' critical thinking or problem-solving skills, and incorporating active learning strategies.

Survey Findings

Enriching Educational Experiences

Because of their positive effects on student learning and retention, special undergraduate opportunities such as learning communities, service-learning, research with a faculty member, study abroad, internships/field experiences and culminating senior experiences are called high-impact practices (Kuh, 2008). FSSE probes faculty members on the importance of high-impact practices.

Faculty Importance for High-Impact Practice Participation

Note: Percentage of faculty responding "Very important" or "Important"

Faculty Participation in High-Impact Practices

| Research with Faculty ^a | 44% |
|---|-----|
| Internship or Field Experience ^a | 33% |
| Service-Learning ^b | 52% |

- a. Percentage of faculty responding "Yes" to participation
- b. Percentage of faculty responding that at least "Some" of their courses include a service-learning component

In general, internships/field experiences are considered important or very important by our faculty, and about half feel that learning communities, service-learning and research with faculty is important or very important. Few of our faculty members highly regard the value of study abroad as evidenced by the fact that less than one-third responded that it is 'important' or 'very important' for students to participate in study abroad before they graduate.

More faculty members place great importance on research with students, student internships and field work than actually participate in or supervise them in a typical week. Service Learning, though, in which 59% placed great importance on it, was included in at least some of 52% of the faculty members' courses.

On NSSE, students reported low levels of participation in high impact practices. Only 5% of seniors reported having ever participated in study abroad, 15% of seniors did research with a faculty member, 16% of seniors participated in a learning community, 29% of seniors participated in a senior culminating experience, and 30% reported doing an internship or field experience. The highest level of reported participation was service-

learning, in which 43% of seniors indicated that at least some of their courses included a community-based project.

Farmingdale faculty reported on opportunities for their students to engage in diversity-promoting discussions. Most of Farmingdale faculty (83%) reported that their course provides opportunities at least some opportunities for their students to engage in discussions with other students of a different race, ethnicity, religious belief, political view or sexual orientation than their own. Most students reported on the NSSE survey that they have had discussions with people from these diverse backgrounds often during the year.

Approximately one-half of faculty indicated that it is important for undergraduates to hold a formal leadership role in a student organization or group, yet on NSSE, only 16% of seniors reported having ever done so.

Student-Faculty Interaction

The majority of our faculty members judge students' relationships with faculty members to be positive, even better than students' relationships with fellow students. In NSSE, the students actually give their relationship with faculty higher ratings than the faculty give. However, first-year students rank the quality of their interactions with their academic advisor higher than they do faculty.

A significant percentage of our faculty members often or very often spend time working with students on activities other than coursework (47%), talking to students about their career plans (69%), discussing course topics, concepts or ideas outside of class (66%), and discussing students' academic performance (71%). However, in the NSSE survey, students reported much less interaction with faculty members in these scenarios.

The vast majority of Farmingdale faculty members (96%) indicate that they provide at least quite a bit of prompt and detailed feedback to students on tests or completed assignments and provide feedback to students on drafts or works in progress quite a bit or very much. However, students do not have the same perception regarding 'prompt and detailed' feedback with 57% of first-year and 61% of seniors stating that they receive prompt and detailed feedback at least quite a bit on tests or completed assignments.

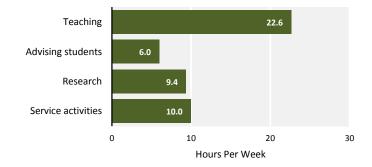

Institutional Emphasis

Faculty members were asked how important it is to them that their institution increases its emphasis on the list of items below. Virtually all of our faculty (98%) would like to see more emphasis on institutional support to help students succeed academically. The next two highest responses also deal with support for students in terms of learning and overall well-being.

Most of our students feel that Farmingdale emphasizes providing support to help students succeed academically and using the tutoring and writing centers quite a bit. Few students, particularly seniors, feel that Farmingdale emphasizes attending events or helping manage their non-academic responsibilities.

Time Allocation

Our faculty reported spending an average of 23 hours per week on teaching activities (preparing, teaching class sessions, grading, and meeting with students outside of class). On average, they are spending more time on service activities (committee work and administrative duties) than they are on research, creative or scholarly activities (10 vs. 9 hrs. per wk.). Faculty members spend an average of 6 hours per week advising students.

Course Structure and Collaborative Learning

Overall, there are differences in how faculty members structure their upper and lower division courses. Farmingdale faculty members teaching mainly lower division students spend more class time on lecturing while faculty members teaching mainly upper division students spend more class time on student presentations and discussion.

The majority of faculty reported that they encourage their students to collaborate with other students quite a bit or very much by; asking other students for help understanding the material, explaining the course material to other students, preparing for exams with other students, and working with other students on projects or assignments. However, first year and senior students indicated that they have actually collaborated with peers

to a lesser extent. Less than one-half of students asked another student for help with understanding course material or prepared for exams with other students. However, 57% of seniors and 42% of first-year students have often worked with other students on course projects or assignments during the academic year.

Emphasis on Cognitive Ability and Learning Goals

Faculty members were asked how much their coursework emphasizes various cognitive techniques. The techniques in which most faculty members stated they emphasize 'quite a bit' or 'very much' included; applying facts, theories, or methods to practical problems (89%), analyzing an idea, experience or line of reasoning by examining its parts (85%), evaluating a point of view, decision, or information source (74%), forming a new idea or understanding from various pieces of information (82%). Only one-third stated that they emphasize memorizing course material quite a bit or very much. The majority of students indicated that their coursework emphasizes the aforementioned higher-order learning principles albeit to a less extent than faculty indicated. The exception is memorization, with 80% of first-year and 64% of seniors indicating that their coursework has emphasized memorization quite a bit.

Approximately two-thirds of faculty members indicated that it is important to include diverse perspectives in course discussions or assignments yet just more than one-third of students reported on NSSE that their course assignments or discussions often included diverse perspectives.

Virtually all of our faculty members organize their selected courses to the greatest extent so that students learn critical and analytical thinking. Other learning goals that our faculty members structure their selected courses around to a large extent include; acquiring job or work-related knowledge and skills, working effectively with others and solving complex real-world problems. To a lesser extent faculty structure courses so that students develop a clarifying personal code of values and understanding of people from other racial and ethnic backgrounds. Students were asked how much their experience at this institution has contributed to their knowledge, skills, and personal development in various aspects. The two categories in which the highest percentage of senior students indicated it contributed at least quite a bit was critical thinking and writing clearly and effectively.

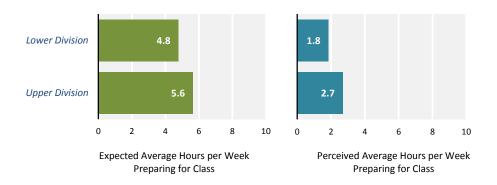

Faculty members were asked how important it is to them that their students do certain tasks. Our faculty placed the highest importance on the following student tasks; connect ideas from the course to their prior experience and knowledge, learn something that changes the way they understood an issue or concept, and examine the strengths and weaknesses of their views on a topic or issue. Approximately one-half of students indicated that they have done the tasks mentioned above at least often.

Learning Strategies

Most faculty members encourage their students at least quite a bit to identify key information from reading assignments, to review notes after class and to summarize what has been learned from class or course materials. Two-thirds to three-quarters of students are following these learning strategies at least often.

Academic Expectations

Faculty members perceive that their students are not putting as much effort into preparing for class as they expect them to. Our faculty members responding about a lower division course expect their students to be spending an average of 4.8 hours per week preparing for their class, but perceive that their students are actually spending an average of 1.8 hours per week preparing for class. For the upper division courses, faculty expect their students to be spending and average of 5.6 hours per week preparing for their class, but perceive them to be spending an average of 2.7 hours per week preparing.

However, on NSSE, 38% of first-year students and 34% of seniors indicated that they are spending at least 16 or more hours per week preparing for classes.

As expected, faculty members are giving longer writing assignments in the upper division courses than in the lower division courses during the semester (34 pages for upper division vs. 19 pages for lower division).

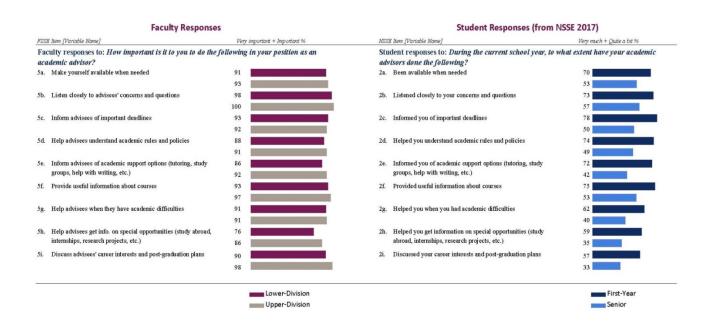

On average, most faculty members feel it is 'important' or 'very important' for students to ask questions or contribute to course discussions and come to class having completed readings or assignments, and to a slightly lesser extent feel it is important for students to prepare two or more drafts of a paper before turning it in, use numerical information to examine a real-world problem, or to evaluate what others have concluded from numerical information. Virtually all faculty members indicated that it is important for students to ask questions or contribute to discussions in class while 57% of first-year students and 70% of senior students reported on NSSE that they often ask questions in class or contribute to class discussions.

Academic Advising

Faculty members were asked a series of questions about their academic advising experiences. Most (88%) stated that they served as an academic advisor during the academic year with majority of those faculty (57%) stating they met with their typical advisee between 1 and 3 times during the academic year while a significant percentage (38%) indicated that they met six or more times. Approximately one-half (48%) indicated that they reached out to their advisees about their academic progress or performance often or very often while 18% stated that they never did.

Faculty were asked how important is it to them to do a certain things as an advisor, such as make themselves available when needed, listen closely to advisees' concerns and questions, etc. Students were similarly asked in the NSSE survey to what extent their academic advisors have done those things. There is a disconnect between the level of importance faculty place on certain aspects of advising and their students' reported extent of experiencing those aspects.

The greatest disconnect is between the importance that advisors of upper division students place on; discussions of career interests and post-graduation plans, help with academic difficulties, help with obtaining information on special opportunities and being informed about academic support options, and the extent to which senior students experienced support for them.

Faculty Professional Development

Our full-time faculty members were asked if they have done several activities during the academic year that relate to professional development. A majority (53%) attended or presented at a professional conference focused on teaching, and 56% mentored a faculty member with regard to teaching. However, less than one-half participated in the following; an institution-wide instructor orientation (32%), an instructor orientation specific to their discipline (26%), a faculty learning community devoted to teaching (44%), or been mentored by a faculty member with regard to teaching (31%).

When asked how important is it that their institution assists them with various faculty responsibilities, the top three responses that received the greatest percentage of faculty members stating 'important' or 'very

important' were; 'creating a supportive learning environment', 'developing students' critical thinking or problem-solving skills', 'incorporating active learning strategies'. The lowest ranked items were 'leading discussions' and 'designing assignments or exams' (57%).

| How important is it that your institution assists you in the following areas? | % stating important or very important |
|---|---------------------------------------|
| Creating a supportive learning environment | 93 |
| Developing students' critical thinking or problem-solving skills | 91 |
| Incorporating active learning strategies | 89 |
| Using technology to improve student learning | 88 |
| Enhancing students' information literacy or fluency | 84 |
| Improving your interactions with students | 83 |
| Assessing student learning | 81 |
| Advising and/or mentoring students | 80 |
| Specifying learning outcomes | 75 |
| Facilitating experiences with diversity | 74 |
| Planning course content (i.e., learning objectives, course goals, syllabi) | 73 |
| Organization and time management | 68 |
| Leading discussions | 59 |
| Designing assignments or exams | 57 |

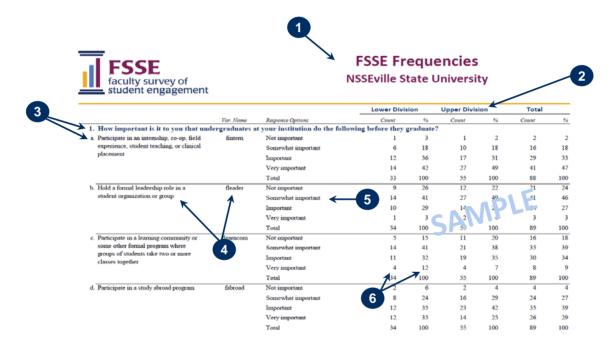

FSSE 2018 Frequencies About This Report

The display below highlights details in the FSSE *Frequencies* report that are important to keep in mind when interpreting your results. For more information about the survey, please visit our website (**fsse.indiana.edu**) or contact a member of the FSSE team.

- Sample: The FSSE Frequencies report is based on information from all faculty at your institution who responded to the survey based on their experiences teaching either a lower- or upper-division course. Faculty who responded based on another type of course or who did not report the course level are not included in this report.
- 2. Class level: Frequency distributions are reported separately for faculty who teach lower-division and upper-division courses.
- 3. *Item numbers:* Item numbering corresponds to the survey facsimile included in your *Institutional Report* and available on the FSSE website.

- 4. *Item wording and variable names:* Survey items are in the same order and wording as they appear on the instrument. Variable names are included for easy reference to your data file and codebook.
- 5. **Response options:** Response options are listed just as they appear on the instrument.
- 6. *Count and column percentage* (%): The Count column contains the number of faculty who selected the corresponding response option. The column percentage represents the percentage of faculty selecting the corresponding response option.

About This Report

The display below highlights details in the FSSE-NSSE Combined Report that are important to keep in mind when interpreting your results. For more information about the survey, please visit our website (fsse.indiana.edu) or contact a member of the FSSE team.

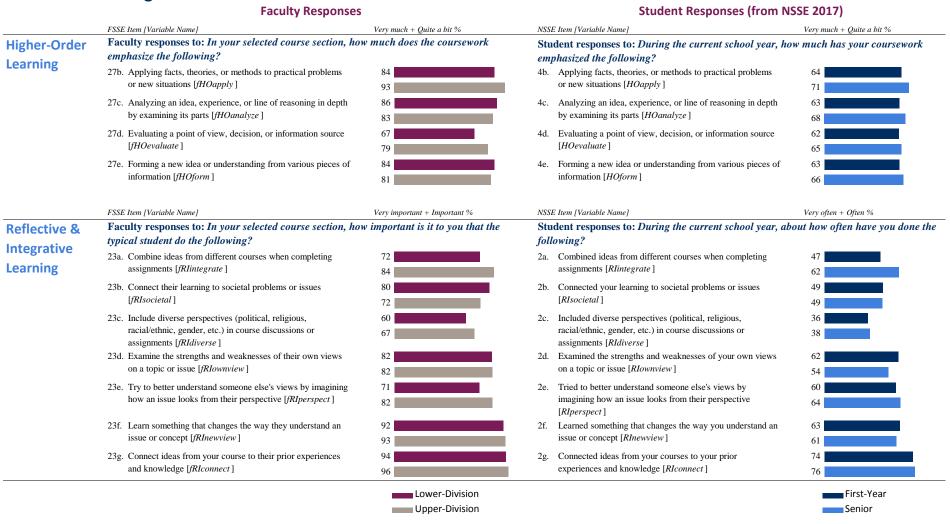

- 1. Sample: The FSSE-NSSE Combined Report shows responses from both students and faculty at your institution who completed NSSE and FSSE. This report contains responses from faculty who responded to the survey based on their experiences teaching either a lower- or upper-division course. Data from faculty who responded based on another type of course or who did not report a course level are not included in this report. All student responses are based on information from all randomly selected or census-administered students at your institution, the same as those included in the NSSE Frequencies and Statistical Comparisons report.
- Class level: Frequency distributions are reported separately for faculty who report teaching lower-division or upper-division courses. Student responses are reported separately for first-year students and seniors as reported by your institution.
- 3. Item numbers: Item numbering corresponds to the survey facsimiles included in your Institutional Report and available on the NSSE and FSSE websites.
- 4. Item wording and variable names: Survey items are worded as they appear on the instrument. Variable names are included for easy reference to your data file, codebook, and FSSE Frequencies report.
- Faculty responses: The percentage of faculty who selected the indicated response categories. To match the response categories provided on the FSSE instrument, this column heading varies throughout the report.
- 6. Student responses: The percentage of students who selected the indicated response categories. To match the response categories provided on the NSSE instrument, this column heading varies throughout the report. The distribution of student responses match those in your NSSE Frequencies and Statistical Comparisons report.

| Faculty Importance | 31 |

NSSE variable: 11d abroad; FSSE variable: 1d fabroad

Faculty Participation

The "Faculty Participation" figures display the percentage of your faculty who participate in three selected High-Impact Practices in a typical week. For Research with Faculty and Internship or Field Experience, this represents the percentage of faculty responding "Yes" to working with or supervising undergraduates in these experiences. For Service-Learning, this represents the percentage of faculty responding that at least "Some" of their courses include a service-learning component.

Research with Faculty

| | <u>'</u> |
